

Focus group on security (and related) Patterns

Eduardo B. Fernandez

This group will discuss the following questions relevant to the use of security patterns:

1. Do we have good methodologies to build secure systems using patterns? If so, why are they not used?
2. Can we merge or combine some of them to have a complete (with tools) and tested methodology?
3. Can we have a unified catalog? At least, unified pattern descriptions
4. Are other related areas that require work?
5. Relationships to misuse, privacy, reliability, and safety patterns
6. New areas without patterns: CPS, IoT, Fog Computing
7. Secure solution frames and patterns

Researchers on security patterns can exchange ideas and start possible collaborations.

Copies of some relevant papers to read before the meeting will be sent out
